

SHANG XIANDA, 04S32
HWA CHONG INSTITUTION (COLLEGE)

I love the richness of nature in all its forms, be they a huge tree or a tiny animal such as the snail. I admire the slow creeper's perseverance, an important quality to help one succeed in a competitive school life. In addition, for centuries snails have been depicted on paintings and drawings for their symbolic meaning of the resurrection. I have learnt a lot about basic design and mathematical equations, which could be abstract, tedious and boring without the use of graphic calculators. With these calculators, my imagination has improved tremendously and my curve sketching has also benefited greatly. Graphic design is no longer formidable to me. Most importantly, I am much more confident now. With the tenacity of a snail, I believe nothing is too difficult. Slowly but surely, step by step, I will work out any problem in graphic design and wield magic with graphic calculators.
