**I perceive the picture as a system of planets revolving around a central star. What's special about this picture is its dynamic, 3D effect that is stunningly different from previous mundane 2D styles. It signifies the  $R^3$  space that we exist in, be it the graphic calculator or myself. It is where we live, work and play in.**

**With this design, I've learnt to push the low resolution 2 bit screen to the limits by displaying complicated 3D-like images. I've also learnt not to limit my imagination to a horizontal screen. In fact, every orientation gives a new feeling.**
