**I am a huge fan of the Spiderman comic series. I was experimenting with polar equations on my calculator when I stumbled upon a graph that resembled a perfectly symmetrical spider web. I thought of drawing Spiderman shooting the web, from scratch. I built him up pixel by pixel over the next month, after which I had to perfectly combine the polar graph with my drawing. It was certainly not easy but the satisfaction of seeing my hero rendered on my calculator made it worthwhile. I have realized that perseverance always yields success and that one should never give up on something that seems difficult as the end result is always well worth the effort.**
