Until I bought a graphics calculator, I never realized its importance. However, after owning a graphic calculator, I felt it has been a great help to me in improving my Mathematics and definitely helped me get a more in-depth understanding of graphs and equations. In my design, it portrays an image of what I think the graphics calculator has helped me to achieve. Without my graphics calculator, I doubt I can achieve as much understanding in Mathematics as before. Lastly, in the process of choosing the design, I learnt the importance of the graphics calculator to me.
