**I chose this design as it represents the World as seen by the straight lines representing the longitude and circles representing the latitude. Graphics calculator plays a huge part in mathematics especially at high level mathematics and the world has been brought closer in this century through technology, and mathematics has played a huge role in it. This is only possible by the existence of calculators to help compute and form the basics of the technologies, thus helping to bring the world close together. This project has helped me to learn more about the world and wonders of mathematics.**
