

**CHRISTOPHER TAN HOUREN, 332
ST. JOSEPH'S INSTITUTION**

Being new to graphing calculators, I was dissapointed at first to find out that it cannot draw what I initially had in mind. However, after experimenting with other modes (polar), I realized the full potential of graphs. The background was what can be found in it and I was entering the realm of the infinite possibilities of graphing calculators. The explosion and face was just an accidental function which I came across. All I added was the smile and hair. I also got to try out applications for constructions and had great fun generally.
