

**WANG XINTIAN, 0405
TEMASEK JUNIOR COLLEGE**

After a day of study, I am envious of the freedom and serenity the fish have in the nature. This beautiful flower-like graph is an excellent example of how arts and mathematics are deeply linked together. I chose it as my design because of its simplicity and regularity. With some creativity I turn it into five lovely fish, with ripples of water around them. Nature and mathematics share the same sense of beauty to all.

With the help of the graphic calculator, I am able to visualize all kind of fascinating graphs. I have also been exposed to new types of curves learnt from my friends and many functions of the graphic calculator, like overlapping pictures by storing and recalling them.
