I chose to draw dragonfly because it is the most unique insect for me. It has an interesting basic T-shape and intricate pattern on its wing. I am experimenting with $y = x^2$ for the body of dragonfly and $y = \sin x$ to simplify the intricate pattern on the wing. I use a circle equation which is $y^2 + x^2 = c$ to make both eyes. Lastly I finished it with drawing the stripes with the pen.
