

**KEVIN KOW JUN HUI, 4C  
HWA CHONG INSTITUTION (HIGH SCHOOL SECTION)**

**In environmental science, we learnt that even minute changes could drastically affect the environment. However, since we live in urban dwellings, we fail to observe the harm we do to the environment, hence I chose this picture to display the contrast between what used to be lush forests and the now prevalent tree stumps.**

**As I typed in formulas, I noticed that they have taken on greater meaning. What used to be mere lines have formed a vivid, expressive picture conveying the effects we have on the environment; proving that “the whole is greater than the sum of the parts”.**
