

**ASHVIN KUMAR JASVANTLAL, 05S34
VICTORIA JUNIOR COLLEGE**

I really want to do something against the dire situation of crises that mother nature is facing, and this simple design competition provides me with an avenue to utilize technology in combination with mathematics to express awareness and “Save Our Dying Earth”. In the process of designing and tinkering around with equations, I have learnt many transformation techniques (such as adding a factor to T in parametric to limit certain graphs) and also further familiarized myself with common ones (e.g. multiplying factors to equations in polar). Moreover, this competition has provided one unique learning technique which is fun inclusive!
