**I have portrayed a glucose molecule, the simplest sugar that provides energy for life. Nature is fascinating, in that it is often so simple, and yet so complex in the way it works. The glucose molecule may appear unimpressive, but without it, life would not be sustainable. While thinking of a design, it occurred to me that Mathematics by itself is useless. Only when it is applied in the real world, then does it gain any meaning. Thus, a graphic calculator, utilized in Mathematics, was used to depict a molecule, studied in Chemistry, symbolizing the practical use of Mathematics.**
