

KWANG ZHEN YANG JOSHUA, CATHOLIC JUNIOR COLLEGE

When thinking about astronomy, we often think about stars and constellations. The constellation in the picture is Orion, the hunter. It is the easiest constellation to spot around the world. In the pyramids of Giza, the pyramids assign to the orion belt, seen by the 3 collinear stars within the four bright stars such that it is a reflection of the sky. I chose this design because it shows the effect of astronomy on humans. I have learnt more than just drawing with my TI-84 Plus, but also programming. Both are really interesting and fun.
