

CHIA CHEOW YONG, NAN CHIAU HIGH SCHOOL

I had chosen Solar System as my design for the Solar System represented astronomy. Astronomy is a profound subject which had intrigued me. In my opinion, astronomy is just like science, making a bold hypothesis and seeking out the truth. Looking at the wide universe with a single telescope, it is indeed amazing how science has influenced astronomy.

I discovered new things which were not taught in the school. It is eye opening how different combinations of equations in polar functions will give a complex yet graceful picture. Not only so, I learnt to persevere and seek for the better.
