

YAK JIE SHENG BENJAMIN, HWA CHONG INSTITUTION

“Astronomy”, hearing this word the first thing that popped into my mind was outer space. Planets were a definite must in the drawing and I chose Saturn as it was the most stunning, mainly because of its giant ring. The Earth, rocket, star, satellite and alien were also included.

The most important thing that I have learnt is resilience and patience. Every part of the design must be well-placed or it will affect the whole picture. I have also learnt that circles can be drawn using three ways, Cartesian, Polar and DRAW function. Overall, this was an enriching experience.
