

## **TAN SHAO YUN, HWA CHONG INSTITUTION**

The telescope is an important tool that helps define astronomy. I drew a telescope pointing towards the viewer as it symbolizes looking forward to the future of astronomy; which celebrates its 400<sup>th</sup> anniversary this year. The background contains a big dipper, which is a famous constellation in astronomy, to help show the viewer that the telescope is looking towards the infinite ends of the universe. I have learnt how to use various functions in the GC to make a picture. Although it was difficult and tedious, it was worthwhile in the end.
