

TEH GUO PEI, VICTORIA JUNIOR COLLEGE

This picture depicts a scene of the Big Bang- which led to the birth of our universe. The cosmic expansion leads to the creation of nine pioneer stars. I deliberately used nine stars because of the myth that there were only nine stars in the universe initially. My design illustrates the Big Bang Theory. I have learnt about the marvelous tools we can use in the GC to create scenic images. Most importantly, through research, I have gained a deeper appreciation and wonderful insights about the universe we live in. Like what my design portrays, the Solar System is indeed a magnificent work of Nature!
