

## **HUANG HAIYAN, RAFFLES INSTITUTION (JC)**

This design depicts the Mind's Eye with a perception focal point inspired by the numerous spiral galaxies in existence, including our Milky Way. I chose Mind's Eye because I think that in some ways, everything that we know of and have (eg. disciplines like astronomy and tools like the GC) enriches and challenges our Mind's Eye, yet at the same time, it is the Mind's Eye that gives meaning to everything.

I learnt quite a bit on astronomy in the process of reading up on the astronomical objects and deciding on a working design. More importantly, I got to explore the capacity of my GC and learnt a lot on graphing using polar/parametric functions, graphing circles, spirals, etc.
