

LIU YANGYANG, TEMASEK JUNIOR COLLEGE

This design shows the earth, the moon and the sun, which are the most commonly known objects in the universe. This design has distinguished the spheres by decorating them with different surface texture so that we can tell the objects right away. Overall, this design wants to show the special relationship among the earth, the moon, and the sun, without any one of them, creatures on earth cannot survive any more.

After doing this design, I find out that GC has so many surprisingly functions besides the well-known ones like drawing simple graphs and so on. This is very appealing to me and inspires me explore GC more in future time.
