

KENICKIE CHER JIA JUN, VICTORIA JUNIOR COLLEGE

For many years, the planet Saturn has never failed to amaze me, especially the Rings around it. Through my design, I dream about a future where mankind is finally able to explore Saturn himself, rather than orbiting a satellite round it. Only then, can we appreciate this beautiful planet and come to learn more about it.

The GC is a really wonderful tool, with many functions that I did not know about till I joined this competition. I really hope that I can learn more of these cool functions and make use of them often.
