

## **YUAN JUNHUI, VICTORIAL JUNIOR COLLEGE**

My picture depicts an astronaut who is floating out of his spacecraft in the space. He has a confident and proud grin on his face. I always admire astronauts because they are indeed heroes of our humankind. They take adventure in the space and every small movement of them makes great significance to the human history. The interesting lifestyle they lead in the spacecraft also fascinated me and meanwhile taught me physics facts.

Through the drawing, other than implementing some skills I leant in school, I also found there are much more fantastic functions that can be used to create an intriguing picture.
